For decades and in the interests of greater flight safety, Competence criteria have been introduced in professional training. The results obtained in professional aviation are indisputable and the proposed new paradigm aims to increase the pilot's ability to resolve, in particular, unfamiliar situations. There is no doubt that during soaring, the conditions faced are, as a general rule, highly variable, which requires the pilot to be highly adaptable. However, even though this flying technique is the one that requires the most resilience, there is no single criterion in the development of training that would lead the future pilot to develop the necessary skills, nor is there a single evaluation criterion that would determine a common standard. From my experience in professional teaching in organisations such as CAE, the experience as an EASA inspector and my own experience as a gliding instructor I wanted to propose a new way of teaching and, above all, of assessing a future glider pilot with COMPETENCE criteria in which the elements of CRM and TEM are always present together with the application of KSA. In this text I hope that gliding instructors will find a tool for teaching their classes and a greater standardisation as a guide to develop their own Competence Based Training and assessment adapted at the local conditions and gliders. The future is not white or black but an infinite scale of greys where different solutions could be proposed successfully. By this the list of missions proposed is my personal view adapted to my programs but it does not pretend to be an absolute

criterion. Hope you will enjoy Happy landings! ought's A-7 Corsair II served the U.S. Navy for over over two decades, and flew with distinction during the Vietnam conflict. The subsonic A-7 was based on Chance Vought's supersonic F-8 Crusader. It boasted a heads-up display, an inertial navigation system, and other innovations. The plane entered service in 1966, and served in Vietnam in late 1967. Its performance was impressive. The USS Ranger's VA-147 flew over 1,400 sorties with the loss of only one aircraft. The Air Force purchased an advanced version, the A-7D, equipped with a more powerful engine. The plane later flew missions over Lebanon, Libya, Grenada, Panama, and Iraq. The last planes in U.S inventory were retired in 1991. Originally printed by the U.S. Navy and Vought, this handbook for the A-7 provides a fascinating glimpse inside the cockpit of this famous aircraft. Originally classified 'restricted', the manual was recently declassified and is here reprinted in book form. Over 17,200 total pages ... Just a sample of the contents:

To create these soldiers, levels of training were unusually punishing and protracted, and those who came through to take their “wings” were a true elite. The Paratrooper Training Pocket Manual 1939–1945 provides an unusually detailed look into what it took to make a military paratrooper during the Second World War, and how he was then utilized in actions where expected survival might be measured in a matter of days. Using archive material from British, U.S., German and other primary sources—many never before published—this book explains paratrooper theory, training, and practice in detail. The content includes: details of the physical training, instruction in static-line parachute deployment, handling the various types of parachutes and harnesses, landing on dangerous terrain, small-arms handling, airborne deployment of heavier combat equipment, landing in hostile drop zones, tactics in the first minutes of landing, radio comms, and much more. Featuring original manual diagrams and illustrations, plus new introductory text explaining the history and context of airborne warfare, The Paratrooper Training Pocket Manual 1939–1945 provides a detailed insight into the principles and practice of this unique type of combat soldier.
